Education

University of British Columbia

BSc Computer Science, GPA: 4.0/4.33

Sept 2022 – Apr 2027

Vancouver, BC

Experience

Asana Inc.

Software Engineer Intern

Apr 2026 – Aug 2026

Vancouver, BC

- Designed pagination architecture for a heavily used user-provisioning API, **solving a decade-old infrastructure problem** and removing a 50,000-user response length limit.
- Engineered a database-level indexing and sort strategy to replace expensive in-memory sorting, **reducing time-to-first-byte by 200x** (from 55 seconds to 0.7 seconds).
- Eliminated costly database scans for API requests** by building a pre-calculated counting system, maintaining high accuracy through eager updates and periodic background sweeps.
- Built a declarative testing library to validate agentic refactors of access control code, **eliminating manual UI inspections and reducing QA time by 80%**.
- Shipped a critical security feature enabling bulk 2FA auditing, directly **resolving a high-priority escalation for a Fortune 500 enterprise account** and mitigating compliance risks.

Rivian Automotive

Software Engineer Intern

Sept 2025 – Apr 2026

Vancouver, BC

- Designed and implemented a data structure to automatically detect vehicle hardware profiles and serve corresponding assets, **replacing $O(N)$ conditional branching with an $O(1)$ lookup**; scaled across 40,000+ configurations.
- Leveraged above data structure to prune hardware-mismatched software assets on first boot, **reducing Android system image size by 15%**.
- Implemented the end-to-end architecture for the R2 Climate Schedule, leveraging lifecycle-aware MVVM for the application layer to **reduce memory footprint by 40%** versus monolithic fragments.
- Implemented an event-driven state machine for the R2 Weather Panel to manage asynchronous OS data streams, mapping **15 distinct network and hardware error states** to deterministic UI states.
- Developed a type-safe, auto-generated Kotlin library to centralize hardware configuration queries, deprecating unsafe reflection usage and resolving SE Linux security vulnerabilities across **50+ legacy access points**.
- Championed AI tooling adoption by authoring documentation, hosting sessions and building agent skills, abstracting complex workflows into streamlined agent commands adopted across the company.

SAP

Site Reliability Engineer Intern

Jan 2024 – Aug 2024

Vancouver, BC

- Provided technical support to **100+ enterprises** for their deployed SAP systems, achieving a **95% satisfaction rate**.
- Built a real-time dashboard to track critical customer issues using **Electron, React and Flask**, **reducing team's first response time to under 10 minutes**, down from 20.
- Resolved **34 critical issues** through code analysis and system tracing to diagnose deployment failures.
- Resolved a high-priority authentication failure affecting 1000+ users, identifying the root cause through Linux log analysis, **OAuth** token inspection, and **SSL/TLS** certificate mismatches.

Projects

Tutoring Business Website 🌐 | *React, TypeScript, Vite, Firebase, Stripe*

Feb 2025 - Apr 2026

- Designed and shipped a tutoring website serving **80+ active users**.
- Achieved **near-zero operating costs** by implementing Firestore and client-side processing for a lean infrastructure.
- Integrated **Stripe API** with **Firebase Functions** to process **\$5,500+** in monthly transactions.

Bluetooth Chat App 🌐 | *Kotlin, JetPack Compose, Bluetooth*

Feb 2025 - Jun 2025

- Built chat application using **Kotlin** and **Android** Bluetooth API, enabling P2P communication over Bluetooth Classic.
- Developed **BluetoothSocket** and **UUID-based authentication protocol** enable peer verification and secure pairing.
- Leveraged **Dispatcher.IO** Kotlin coroutine to offload intensive I/O operations from main thread, reducing UI blocking and **improving message transmission speed by 40%**.

Technical Skills

Languages/Frameworks: Python, Kotlin, TypeScript, Android, React, Scala, Javascript, HTML, CSS, Java, SQL

Developer Tools: NodeJS, GraphQL, AWS, Google Cloud Platform, Git, Linux, Docker, JUnit, Mocha, Chai
